A Description of the

four Quarters of the yeare:

And first of Winter quarter.

1612.

Sol in v. m. x.

TH E Winter quarter of this yeare by Astro-
nomicall computation, which is since Christs
incarnation 1612. taketh his beginning the
xiii. day of December preceeding; at which
time, the Sunne entred into the first degree of
Capricorne, causing the Brumall Solstice, or shor-
test day and longest night in the yeare, by naturall
reason of the Sunnes greatest declination from the
Equinoctiall Line: And so Winter continueth
vntill the x. day of March following, that the
Sunne enter into the signe Aries.

This Quarter according to the vsuall dispositi-
on thereof, is of the nature of Water, that is, cold
and moyst, vnpleasant for the most part to Traue-
lers; and likewise very noysome & cumbersome to
Aged persons, causing abundance of cold moyst-
nesse and superfluitie of rawnesse to ouerflow in
their

A Prognostication.

their bodyes: It is also a holosome time for such as are in health; but grievous to the sicke.

Touching the temperature and state of this Quarter, I referre you to the dayly disposition of this season.

The Sickneses and Griefes most like to invade and bere mens bodyes, within this Winters reuolution, are like to be these, namely, Inflammations of the Lungen, Catharres, Coughes, paines in the Head, Breast, and Stomacke; Stytches in the Sides, the Palsie, ach in the Loynes, Poles, Rhewmes, soze Eyes, Dropsies, paine in the Joyntes, and such other very grievous; whereof many young persons as well as the aged, are like to feele the extremitie.

Of the second Quarter of the yeare, called the Spring.

Sol in γ. δ. II.

The second part of this yeare, which is called the Spring, taketh beginning when the Sunne entereth into the first scruple or minute of the signe Aries the Equinoctiall point, being the x. day of March, making the day and night of one equal length through the whole world.

This

Dade. 1612,

This Quarter is naturally hotte and moyſt, and therefore ſayd to reſemble the qualitie of the Ayre; alſo the moſt pleaſant part of the yeare, beſt time to remove Sickneſſe and paines gotte before, and to auoyde and prevent thoſe that are to come.

Touching the ſtate & temperature of the Weather this Quarter, may be ſeene in the dayly diſpoſition of the ſeaſon.

The Grietes and Diſeaſes moſt like to moleſt in this Quarter, are paines in the Head, Angina or Squinſie, Coughes, paine in the Sides, Feuers of diuers ſortes, Inflammations in the Luer, Fluxes of Blood, Itchings, ſmall Pockes, and Meaſelles, ſharpe Rheumes, Palsies, Goutes, and Melancholy paſſions; with many other, incident to ſinfull man.

Of the third Quarter of the yeare,
called Sommer.

Solin S. A. m.

THe Sommer ſeaſon, being the third part and Quarter of this yeare, hath his entrance or beginning the xii. day of Iune, the Sunne then entring into the firſt degree of Cancer, the Eſtival or Sommer Solſtice, having his greateſt declina-
tion

A Prognostication.

tion to the North from the Equinoctiall, and is the longest day, and shortest night in the yeare: which Quarter or Season continueth untill the xiii. day of September, that the Sunne enter into Libra.

The predominant qualities of this Season, according to his peculiar nature, are heate and drynesse; in respect whereof, it is sayd to resemble Fire & Choller: and at this time do hot chollericke Humours more abundantly raine & rage in mans booy, then in any other Quarter of the yeare.

As touching the present Inclination of y^e Weather, you may plainly see in the dayly disposition thereof,

The Sickneses of this Season, are Feuers of diuers sortes, as Continualles, Tertians, Quartanes, Fluxes, Vomites, Watering Eyes, Sorenesse in and about the Mouth and Throat, Byles and Blisters, Infections in the Lungen, Dropsies, and Ach in the Joyntes.

Of the fourth part of the yeare, called
Autumne, or the Fall of the Lease.

Sol in ϵ . m. 7.

The Harvest Quarter, being the fourth and last part of the yeare Astronomicall, beineth curren- more at the Sunnes departure from the last term- pie of the 30. degree of Virgo, and speedeth into the first minute of the second Equinoctial signe Libra, which shall be this yeare the xiiij. day of September, continuing untill the xii. day of December next ensuing, working the same effect that he did at his going into Aries; that is, making the day and night inst of one equall length, the Sonne then rising at vi. in the morning, and setting at vi. at night: But the Seasons are farre unlike in qual- itie, for this of it selfe is vnconstant and variabie.

In this Season it is good to abstaine from all excess of Meates and Drinkes, and all kind of dis- orders, which breed and increase raw Humors, and indigested in the Chapnes.

Some affirme it to be most healthsome when it is moist, and not so good when it is dry; for then it nourisheth and reneweth the remanentes & reliques of the Sommer sicknesses: for what hath ben cull in the seasons before, through the excrete Date
of

A Prognostication.

of the yeare, or other accidentall causes, the same will commonly bitter it selfe in this Season, to the griuance of the partie diseased.

As touching the Disposition of Weather in this Quarter, may be seene in the dayly inclination thereof.

The Sickneses of this season, are Stoppingses of the Spleene, Dropsies, Consumptions, Strangurie, Sciatica, Coughes, Pegrime, Stitches, Falling sicknesse, Shortnesse of breath, Paynes in the Stomacke, Blacke Jaundies, Measels, small Pockes, and Gripings in the Belly; with diuers other needlesse to be named, though grieuous to whom they happen.

Wherefore as well in this, as at all times else, I aduise you, to haue speciall regard to your behaviour and diet, for the auoyding of these, and manie more painefull Diseases; and neglect not the counsaile and helpe of the Physicion, whom God hath ordained for thy good.

Dade. 1612.

A brieve Description how the seauen Planets are placed about the Earth in the Skie, or vnder the Earth, for euery Month after Sunne setting; by which you may perceiue how they keepe their motion night and day all the yeare. Moreouer, the good dayes of Sympathv touching mans completion and body, in caules of administration of Physicke or such like: And also, the Euill dayes (according to the maleuolent aspectes of the Planets) in which it is dangerous to let blood, take vomits, purgations, sweates, or such like attempts,

Of Ianuarie.

Saturne is in midde heauen after Sunne setting.
Iupiter riseth in the East after Sunne is downe.
Mars is vnder the earth at Sunne going downe.
Venus and Mercury goe downe with the Sunne.

First Quarter on Wednesday the first day, at h. of the clocke 20. minutes in the morning.

The first day windy and wet.

The ii. and iii. dayes sayre and calme.

The iiii. and v. dayes rather cold and cloudy.

The vi. and vii. dayes sayre for the tyme.

Full Moone on Wednesday the viii. day, at h. of the clocke in the morning.

The viii. ix. x. xi. and xii. dayes, cold winterly weather, with snow or other moysture.

The xiii. day temperate for the season.

Last Quarter on Thursday the xiiii. day, about ix. of the clocke at night.

The xiiii. day meetly faire.

The xv. xvi. xvii. and xviii. dayes very variable and foule weather.

The xix. day some change.

The xx. and xxi. dayes cold and inconstant.
